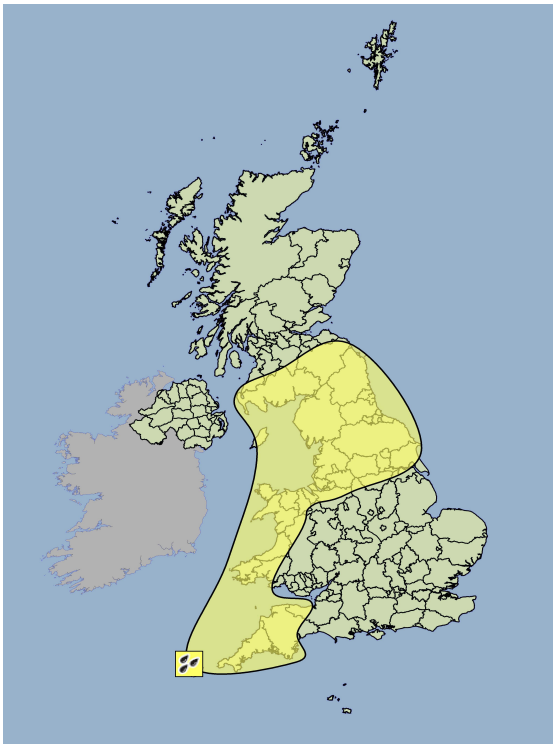
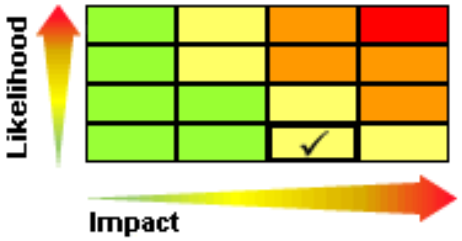
National Severe Weather Warning Service





Chief Forecasters Assessment
Areas of heavy rain will continue to spread northwards across parts of England, Wales and southern Scotland during Friday. The rain will become slow-moving, bringing prolonged and occasionally intense rain to parts of northern England, southern Scotland and North Wales. 20-40mm is likely to fall, locally over 60mm, which may cause some flooding from surface water or rivers, though some locations within the yellow area will miss the largest rainfall totals.

Elsewhere, heavy, thundery showers will affect parts of Wales and southwest England, with the potential for over 50mm to fall in a few hours very locally. This could lead to localised flooding, whilst nearby locations could remain dry.

This is an update to the warning issued on Thursday to include parts of southwest Scotland, whilst also to remove parts of central England and east Wales. The tick in the risk matrix applies to the large area as a whole, but for some regions within the yellow area, there is also a moderate risk of minor disruption.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:40 on Fri, 06th Sep 2013** until **23:59 on Fri, 06th Sep 2013**

Heavy rain, persistent in places, will affect many areas during Friday. The public should be aware of the risk of disruption due to localised flooding.
